abstract

Male circumcision is a common procedure, generally performed during the newborn period in the United States. In 2007, the American Academy of Pediatrics (AAP) formed a multidisciplinary task force of AAP members and other stakeholders to evaluate the recent evidence on male circumcision and update the Academy's 1999 recommendations in this area. Evaluation of current evidence indicates that the health benefits of newborn male circumcision outweigh the risks and that the procedure's benefits justify access to this procedure for families who choose it. Specific benefits identified included prevention of urinary tract infections, penile cancer, and transmission of some sexually transmitted infections, including HIV. The American College of Obstetricians and Gynecologists has endorsed this statement.

PEDIATRICS 2012;130:585–586
cultural beliefs and practices. The medical benefits alone may not outweigh these other considerations for individual families.

Findings from the systematic evaluation are available in the accompanying technical report. The American College of Obstetricians and Gynecologists has endorsed this statement.

**TASK FORCE ON CIRCUMCISION**
Susan Blank, MD, MPH, Chairperson

Michael Brady, MD, Representing the AAP Committee on Pediatrics AIDS
Ellen Buerk, MD, Representing the AAP Board of Directors
Waldemar Carlo, MD, Representing the AAP Committee on Fetus and Newborn
Douglas Diekema, MD, MPH, Representing the AAP Committee on Bioethics
Andrew Freedman, MD, Representing the AAP Section on Urology
Lynne Maxwell, MD, Representing the AAP Section on Anesthesiology
Steven Wegner, MD, JD, Representing the AAP Committee on Child Health Financing

**LIAISONS**
Charles LeBaron, MD — Centers for Disease Control and Prevention
Lesley Atwood, MD — American Academy of Family Physicians
Sabrina Craig, MD — American College of Obstetricians and Gynecologists

**CONSULTANTS**
Susan K. Flinn, MA — Medical Writer
Esther C. Janowsky, MD, PhD

**STAFF**
Edward P. Zimmerman, MS
