#### Acknowledgment

The author wishes to thank Dr. Strother Walker for statistical advice and Dr. Henry K. Silver for reviewing the manuscript.

---

#### CORRECTION

An error was made in the Committee on Nutrition report in the November issue of *PEDIATRICS* (40:916, 1967). On page 919 the first sentence in the paragraph on iron should read:

The human infant will become deficient in iron if only the amount available in human milk, 0.2 mg per 100 kcal, is supplied during the first 12 months of life.

**CORRECTION**
