
ACKNOWLEDGMENTS
Medication and placebo agents were supplied by the Ciba-Geigy Pharmaceutical Company. Dr. Jack Wetter, Dr. Ronald French, and Joseph Ward assisted with psychometric procedures. Dr. Bernd Reitter participated in the initial organization of this study. Joan Riehl provided demographic information and measures.

CORRECTION

In column two, page 600, Kopel and Barbero were inadvertently misquoted. The sentence should read: "Kopel and Barbero have studied gastric secretion in infancy and childhood, and have shown a normal mean basal acid of 0.45 mEq/kg/hr for children 6 to 12 years of age. Our patient had a basal output of 41 mEq/hr or 17 mEq/10 kg/hr (38 times normal)."
The Pediatric Pneumogram: A New Method for Detecting and Quantitating Apnea in Infants
