ERRATA

In the article, “Crying and Motor Behavior of Six-Week-Old Infants and Postpartum Maternal Mood,” by Miller, Barr, and Eaton (Pediatrics. 1993;92:551-558), on page 555, the figures were printed incorrectly. The figure appearing above the legend for Fig 1 is actually Fig 2, and the figure appearing above the legend for Fig 2 is actually Fig 1.

In the article, “Safety of Continuous Nebulized Albuterol for Bronchospasm in Infants and Children,” by Katz et al (Pediatrics. 1993;92:666-669), under “Materials and Methods,” “At our institution CNA therapy is usually initiated when standard therapy for bronchospasm, ie, albuterol in a dose of 0.5 mg/kg given every 20 to 30 minutes, has failed to reduce respiratory distress.” should be corrected to read “...0.15 mg/kg given every 20 to 30 minutes...”

“Low-Level Lead Exposure and Children’s Cognitive Function in the Preschool Years” by Bellinger et al (Pediatrics. 1991;87:219-227) has an error in Fig 2 on page 225. The error bars for the mean change in score for children in the “low” lead group should cover an interval that is approximately 50% larger than that indicated. The correct boundaries for mean ± SE are 12.3 and 1.2 points.

In “Phenobarbital and Cerebral Blood Flow During Hypertension in the Newborn Beagle” by Goddard-Finegold et al (Pediatrics. 1990;86:501-508), the equation at the bottom of the left column on page 502 should read, “CBF (mL-min⁻¹-100 g⁻¹ = counts-min⁻¹-100 g⁻¹ of brain-reference withdrawal rate/counts-min⁻¹ in reference blood.”
