Baxter et al. Development and Validation of a Pictorial Nausea Rating Scale for Children. *Pediatrics*. 2011;127(6):e1542–e1549

An error occurred in this article by Baxter et al, titled “Development and Validation of a Pictorial Nausea Rating Scale for Children” published in the June 2011 issue of *Pediatrics* (2011; 127 (6): e1542–e1549; doi:10.1542/2010-1410). On page 1542, in the Abstract section under Results, starting on line 4, this reads: “Visual analog scales for nausea and BARF scores ($P = .20$) were significantly higher in patients requiring antiemetic agents and decreased significantly after treatment, while posttreatment pain scores ($P = .47$) for patients receiving only antiemetic agents did not.” This should have read: “Visual analog scales for nausea and BARF scores were significantly higher in patients requiring antiemetic agents ($P = .0001$) and decreased significantly after treatment ($P = .0002$), while posttreatment VAS ($P = .20$) and FPSR scores ($P = .47$) for patients receiving only antiemetic agents did not.”
