Gray et al. Recurrence Rates After Intussusception Enema Reduction: A Meta-analysis. *Pediatrics*.2014;133(7):110–119

An error occurred in the article by Gray et al, titled “Recurrence Rates After Intussusception Enema Reduction: A Meta-analysis” published in the July 2014 issue of *Pediatrics* (2014;134(1):110–119; doi:10.1542/peds.2013-3102). On page 110, under the Results heading of the Abstract, this reads: “Overall recurrence rates were 11.6% (95% confidence interval [CI] 10.0%–13.3%) for contrast enema (CE), 6.9% (95% CI 5.1%– 9.0%) for ultrasound-guided noncontrast enema (UGNCE), and 7.7% (95% CI 5.6%–10.0%) for fluoroscopy-guided air enema (FGAE). Recurrence rates within 24 hours were 2.7% (95% CI 1.2%–4.8%) for CE, 0.9% (95% CI 0.1%–4.8%) for UGNCE, and 1.5% (95% CI 0.0%– 6.2%) for FGAE. Recurrence rates within 48 hours were 3.6% (95% CI 1.9%–5.9%) for CE, 3.1% (95% CI 0.1%–10.4%) for UGNCE, and 1.9% (95% CI 0.1%–5.6%) for FGAE.”

This should have read: “Overall recurrence rates were 12.7% (95% confidence interval [CI]: 11.1%–14.4%, $I^2 = 28.8%$) for contrast enema (CE), 7.5% (95% CI: 5.7%–9.8%, $I^2 = 52.4%$) for ultrasound-guided noncontrast enema (UGNCE), and 8.5% (95% CI: 6.9%–10.4%, $I^2 = 50.1%$) for fluoroscopy-guided air enema (FGAE). Recurrence rates within 24 hours were 3.9% (95% CI: 2.2%–6.7%, $I^2 = 47.0%$) for CE, 3.9% (95% CI: 1.5%–10.1%, $I^2 = 0.0%$) for UGNCE, and 2.2% (95% CI: 0.7%–6.5%, $I^2 = 59.8%$) for FGAE. Recurrence rates within 48 hours were 5.4% (95% CI 3.7%–7.8%, $I^2 = 32.3%$) for CE, 6.6% (95% CI: 4.0%–10.7%, $I^2 = 0.0%$) for UGNCE, and 2.7% (95% CI: 1.2%–6.5%, $I^2 = 73.8%$) for FGAE.” The correct values were reflected in the body of the manuscript.
