#### ERRATA

*PEDIATRICS*, Volume 23, page 731, April, 1959: Unfortunately in printing of the color plate (Fig. 1) in the article by Gluck, the plate was inverted and reversed. The legend should be revised to read: Fig. 1. A, B, C) Usual appearance of positive patch tests. D) Positive test from sweat on the forehead of a 2½-month-old infant. E) Negative test (normal). F) Positive test when patient sweated very little.

*PEDIATRICS*, Volume 23, page 585, March, 1959: In the article by Byers, page 597, column 2, line 13, in the sentence, "Oral administration of edathamil is therefore important to shorten the metabolic disturbance due to lead following treatment in the acute stage, even when protection from lead appears to be complete," "important" should read "impotent."
