newly developed miniaturized instrumentation, eight cases of neonatal Hirschsprung's disease were diagnosed among 28 suggestive cases studied; the remaining 20 have developed normal bowel habits. Screening by anorectal manometry of newborns with the meconium plug syndrome, or with difficulty passing bowel movements, may provide early differentiation of Hirschsprung's disease and may help avoid the deadly complication of enterocolitis.

CORRECTION
In the Abstract of the article by Drs. Kalina, Hodson, and Morgan: Retrolental Fibroplasia in a Cyanotic Infant, PEDIATRICS, 50:765 (November), 1972, the word "not" was omitted from the second sentence. This should begin: "Arterial oxygen tensions usually considered to be pathologic were not noted in this infant and would not appear to have been possible . . ."
