

life support and what kind of assistance they as practitioners are expected to provide their emergency medical services system.

SUMMARY

It is our belief that all physicians who deliver pediatric care from an office setting should assess their ability to deliver pediatric emergency care by assessing their training, their emergency plan, and the emergency equipment they have on hand. They should also know what services are available from their emergency medical system.

ERRATA

In the statement "Measles: Reassessment of the Current Immunization Policy" by the Committee on Infectious Diseases (*Pediatrics* 1989;84:1110-1113), the fifth paragraph on page 1112 should read as follows: During an outbreak in these areas, particularly if there are high attack rates in younger infants, monovalent measles vaccine (or MMR) may be given to infants as young as 6 months of age.

In the reply to the Letter to the Editor "Status Epilepticus—Risks and Treatment" by Freeman (*Pediatrics* 1989;84:1121-1122), the references are as follows: 1) Committee on Drugs. Behavioral and cognitive side effects of anticonvulsants. *Pediatrics*. 1985;76:644-647; 2) Camfield PR, Camfield CS, Smith EC, et al. New treated childhood epilepsy: a prospective study of recurrences and side effects. *Neurology*. 1985;35:722-725; 3) Freeman JM, Tibbles J, Camfield CS, Camfield PR. Benign epilepsy of childhood. *Pediatrics*. 1987;79:864-868.

In the article "Dietary Behavior and Eating Attitudes in Children" by Maloney et al (*Pediatrics* 1989;84:482-489), in the third, sixth, and ninth lines of the left-hand column on page 484, the word *better* was inappropriately substituted for the correct word *higher*.
