

Supplemental Information

SUPPLEMENTAL TABLE 4 Covariate-Adjusted Standardized Means From Linear Regressions Predicting Physical and Mental Health Outcomes With Bullying History, Controlling for Fifth-Grade Value of Outcome

| | Seventh-Grade Bullying History | | | | Tenth-Grade Bullying History | | | |
|--|--------------------------------|----------------------|------------------------|----------------------------|------------------------------|----------------------|------------------------|----------------------------|
| | Not Bullied (72.9%) | Past Only (17.6%) | Present Only (5.2%) | Past and Present (4.3%) | Not Bullied (69.8%) | Past Only (23.8%) | Present Only (3.0%) | Past and Present (3.4%) |
| Psychosocial quality of life vs not bullied | 0.09 | 0.01 ^a | −0.74 ^{***} | −0.76 ^{***} | 0.07 | 0.01 ^a | −0.74 ^{***} | −0.88 ^{***} |
| vs past only | | | *** | *** | | | *** | *** |
| vs present only | | | | ^a | | | | ^a |
| Physical quality of life vs not bullied | 0.04 | 0.00 ^a | −0.30 ^{***} | −0.38 ^{**} | 0.03 | 0.01 ^a | −0.32 [*] | −0.31 ^{**} |
| vs past only | | | ** | ** | | | * | ** |
| vs present only | | | | ^a | | | | ^a |
| Depression symptoms vs not bullied | −0.06 | 0.05 [*] | 0.37 ^{***} | 0.44 ^{***} | −0.06 | 0.02 ^a | 0.46 ^{***} | 0.67 ^{***} |
| vs past only | | | *** | *** | | | *** | *** |
| vs present only | | | | ^a | | | | * |
| Self-worth vs not bullied | 0.04 | −0.04 ^a | −0.26 ^{***} | −0.27 [*] | 0.05 | −0.02 ^a | −0.39 ^{***} | −0.55 ^{***} |
| vs past only | | | ** | ^a | | | ** | *** |
| vs present only | | | | ^a | | | | ^a |

Bullying history was dummy-coded as not bullied, bullied in past only, bullied in present only, or bullied in both past and present. Weighted percentages are shown underneath each bullying category. Multivariable models controlled for fifth grade value of the outcome, child race/ethnicity, gender, age, chronic illness status, BMI percentile, and sexual orientation; household income; parent education and marital status; geographic setting; and school-level means for race/ethnicity and BMI percentile, with missing indicators for income, education, and BMI. Outcomes were not imputed; the actual number of observations ranged from 4267 to 4297 depending on the outcome and grade.

* $P < .05$.

** $P < .01$.

*** $P < .001$.

^a $P \geq .05$.
