

Supplemental Information

SUPPLEMENTAL FIGURE 1

CONSORT (Consolidated Standards of Reporting Trials) figure. Each subject is counted once for study disposition. Thirteen subjects who were screened for the study were never randomized. Of the 11 nonrandomized subjects who did not meet the inclusion-exclusion criteria, the most common reason was that the subject has received a tetanus and diphtheria toxoid booster dose (Decavac, Adacel, Boostrix) or tetanus toxoid within the past 5 years (4 of the 11; 36%).
